Architecture of Early Childhood

A SMALL YET BOLDLY INVITING CENTRE IN JAPAN THAT USES AN EXISTING BUILDING

Apr 5, 2018

Japanese (and early childhood specialist) architects HIBINOSEKKEI and Youji no Shiro are at it again with the MK-S Nursery - a small (160sqm) centre that inhabits an existing residence and disused 2-storey shop.

Restoring the existing fabric of the building with new ply internal linings and a perforated "starry" metal screen with house and square shaped windows the result is a tidy and yet fun new building for the community's young children.

 | Passionately promoting excellence in the environments designed for early childhood.

It is AEC's belief that a child's early learning and growth is best achieved when the environmental conditions are right - which goes to say the architecture plays a pivotal role. We (as a society) need an architecture that says: 'We believe in these children!' as it is these very children who will one day be our future - so lets give them the very best start in life..

Children's Furniture for Healthy and Safe Environments: Miniature Beds, Chairs and Tables

July 05, 2022

Reminiscing on his childhood, [Peter Zumthor](#) once said: “Memories like these contain the deepest architectural experience that I know. They are the reservoirs of the architectural atmospheres and images that I explore in my work as an architect.” These words allude to a fundamental concept behind kid friendly-design: everything we encounter in the first years of our lives, including architecture, can have a great impact on our future perspective of the world. [When spaces are designed according to children’s specific needs](#), they stimulate their physical and [mental well-being](#), as well as boosting autonomy, self-esteem and socialization skills. Therefore, architects have the responsibility to ensure that kids live, play and learn in environments that contribute to their long-term healthy development.

The **UIA Built Environment network** aims to help Architects and Teachers everywhere show young people what makes good Architecture and a Sustainable environment. Developing young people's awareness of architecture, the city and sustainable development is an urgent and vital challenge.

With access to knowledge in these areas they will be able - as adult citizens, users, clients and decision makers – to make their voices heard and influence the political, economic and social strategies, which will shape their cities and their environment. The UIA's Architecture & Children Website is provided by the **UIA Architecture & Children Work Programme**.
